

## 高齢者DLBCLの治療戦略

三浦勝浩  
日本大学医学部 血液膠原病内科

第14回中四リンパ腫カンファレンス  
2012. 4. 7.

### 自己紹介

2007年	•血液専門医 •日本成人白血病治療共同研究グループ(JALSG) 支持療法委員
2008年	•JSCT研究会「末梢T細胞リンパ腫に対する自家および同種造血幹細胞移植の比較検討：日韓共同研究」 施設調査責任医師 •悪性リンパ腫治療研究会「未治療マントル細胞リンパ腫に対する化学療法および自家末梢血幹細胞移植」主任調査責任医師 •日本大学医学部内科学系血液膠原病内科 助教(がんプロ)
2009年	•NK腫瘍研究会「NK細胞腫瘍および関連T細胞腫瘍に関する多施設共同工法観的研究」 施設調査責任医師 •日本大学医学部附属板橋病院 腫瘍センター運営協議会 協議員
2010年	•がん薬物療法専門医（海外学会派遣事業） •造血器腫瘍領域におけるMRSA感染症に対するarbekacinのPK-PD理論を用いた有用性の検討 代表責任研究者
2011年	•再発・難治性びまん性大細胞型B細胞リンパ腫に対するRituximab併用IDEA療法の第Ⅱ相臨床試験 施設責任医師

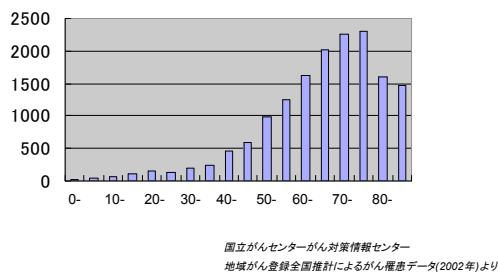

### Agenda

- Issues about elderly DLBCL
- Selecting Fit/Unfit patients
- Strategies for High/Low-risk patients
- Dose modification
- Alternates for R-CHOP
- Unfit/Refractory Patients
- Future directions
- From standardization to individualization -

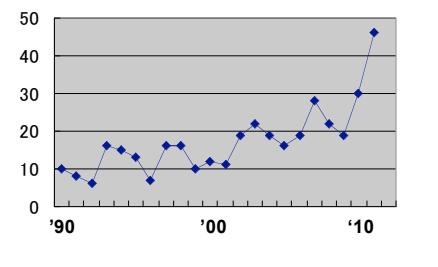

### 高齢者の定義

- 一般に決まったものは無い
- WHOでは「65歳以上」と定義
- 多くの臨床研究で習慣的に採用される  
⇒生物学的根拠に乏しい  
⇒同年齢でも臓器能の個人差は大きい

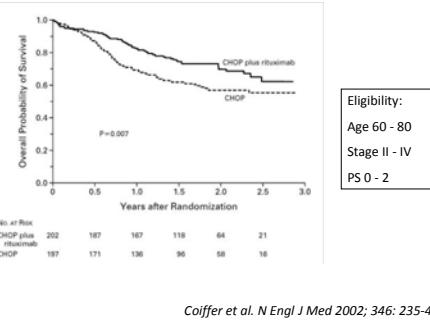

### 悪性リンパ腫の年齢階級別罹患者数

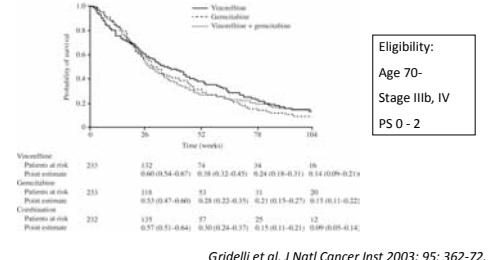

### 高齢者リンパ腫に関する研究

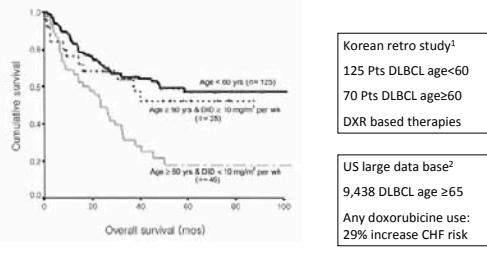

## R-CHOP: the “Gold Standard”

## DLBCL: curable disease cf. Elderly advanced NSCLC

## Anthracycline: the key drug

## 高齢者DLBCLにまつわるジレンマ

効果 vs 毒性

Cure vs TRM

## “Fit” vs “Unfit”

- “Fit”な患者をいかに選別するか

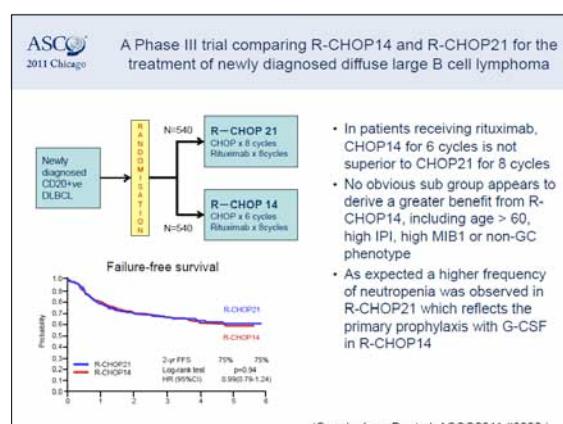

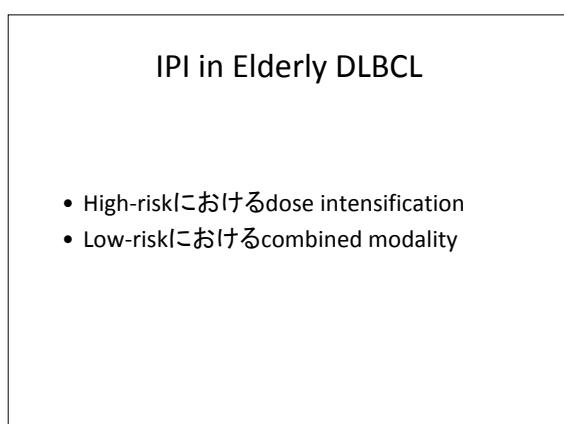

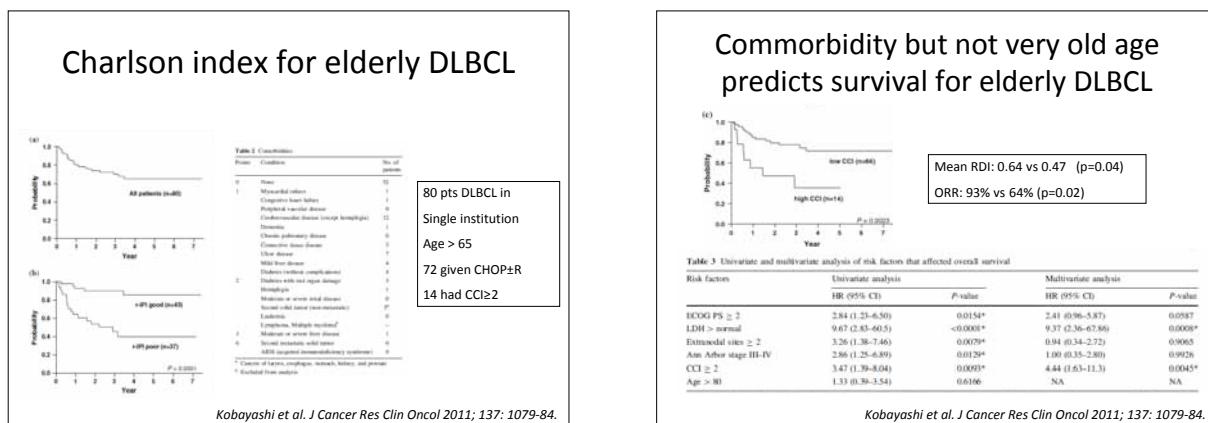

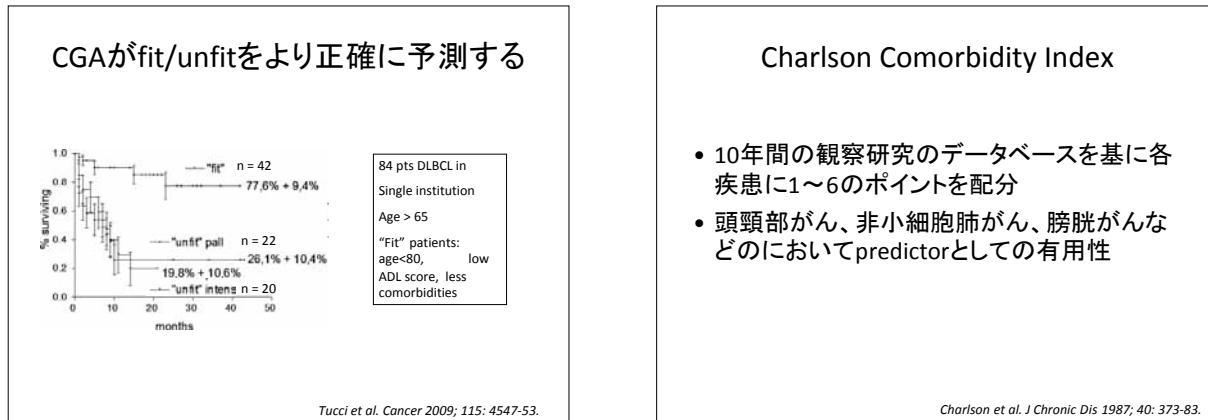

## Comprehensive Geriatric Assessment

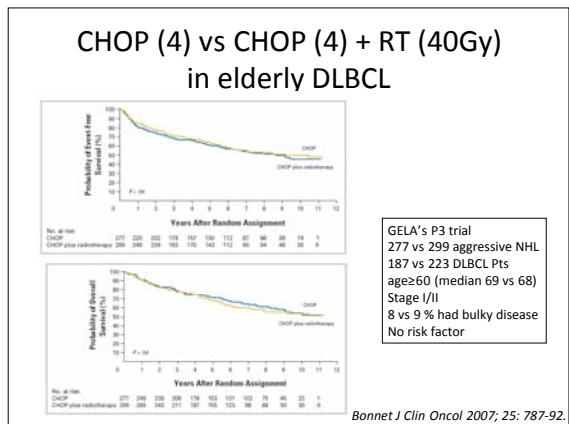

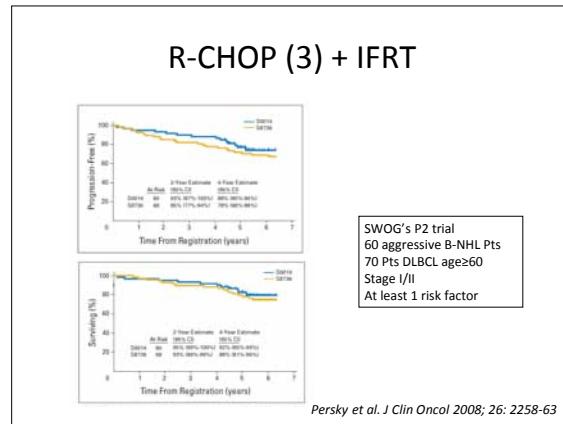

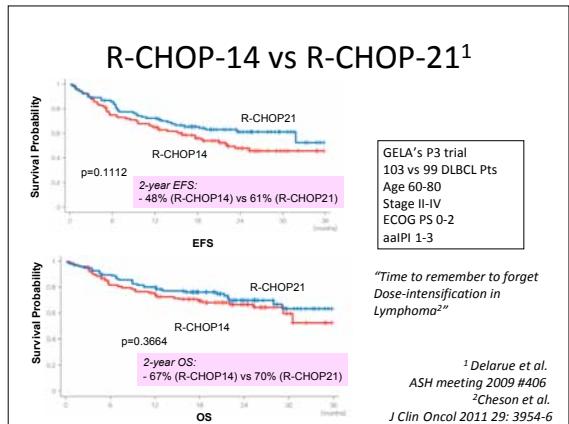

- 高齢者の総合的機能評価に対して多角的に評価
- 近年多数の高齢者悪性疾患で予後や治療選択で活用

### 評価項目:

- ADL: 食事、入浴、トイレ、歩行、階段
- IADL: 買い物、調理、洗濯、服薬、金銭管理、乗り物の利用
- 視聴覚、身体機能に影響を与えるやすい合併症
- 認知機能(記憶、見当識、判断力など)
- 抑うつ度、意欲、QOL
- 社会性: 居住形態、キーパー、経済状態、地域社会との交流、介護保険の利用の有無、介護負担度など

Extermann & Hurria J Clin Oncol 2007; 25: 1824-31.

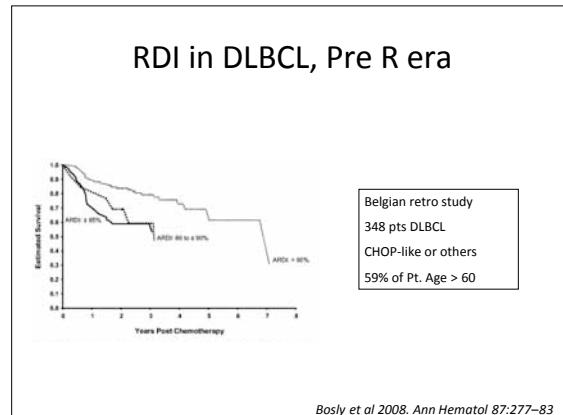

## Dose modification

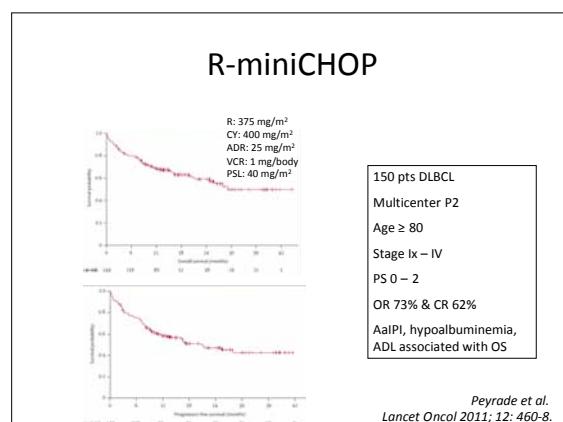

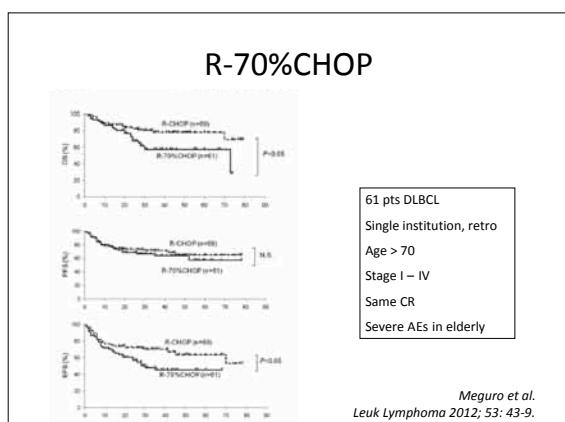

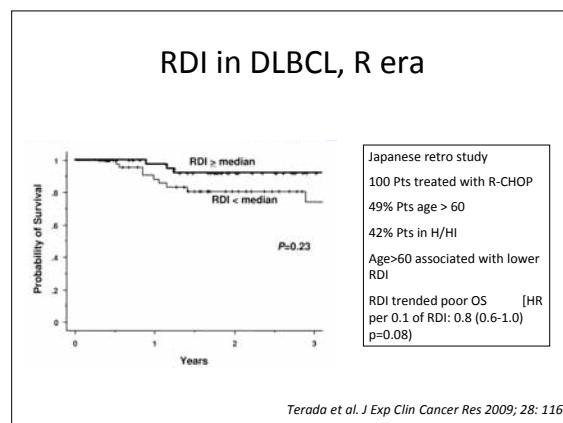

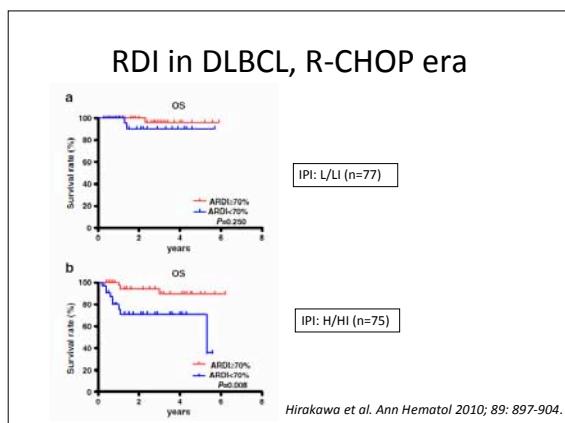

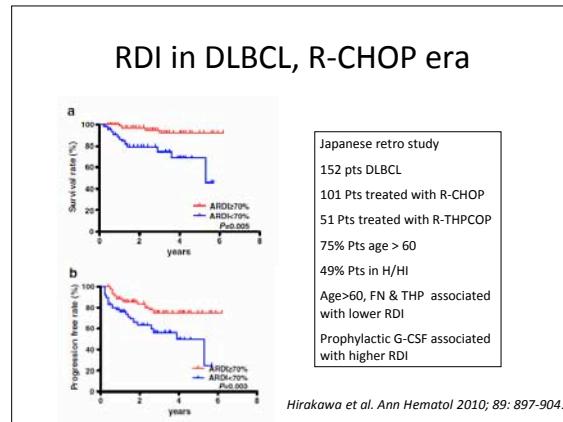

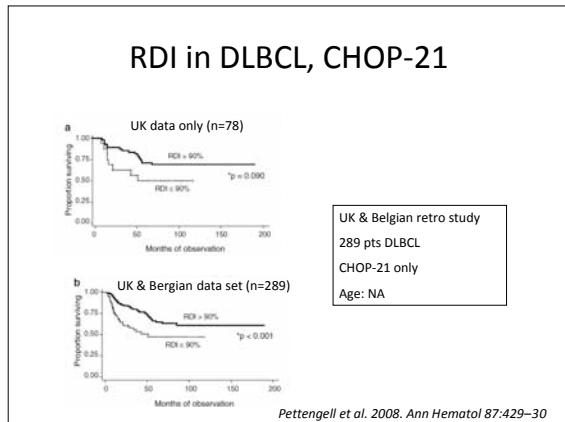

- Significance of RDI in the R-CHOP era
  - Dose modified regimen for elderly DLBCL

## Relative Dose Index (RDI)

- RDI =  $\frac{\text{Actual dose per specific period}}{\text{Planned dose per specific period}}$
  - DLBCLにおいては高いほど治癒率が高い

Dixon et al 1986. J Clin Oncol 4:295-305  
Kwak et al. 1990 J Clin Oncol 8:963-77  
Epelbaum et al 1990. Cancer 66:1124-9  
Lepage et al 1993. Ann Oncol 4:651-656

## Dose modification for elderly DLBCL

- 許容intensityはhealth statusに依存する
- 至適intensityはdisease statusに依存する

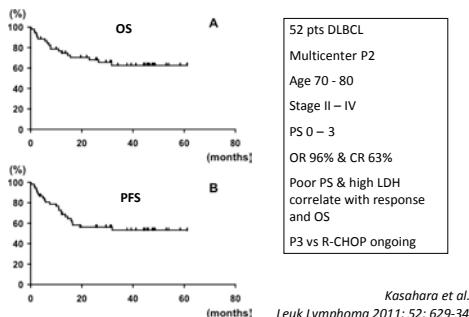

→標準化より個別化を図るべき

*Miura et al. Lancet Oncol 2011; 12: 725*

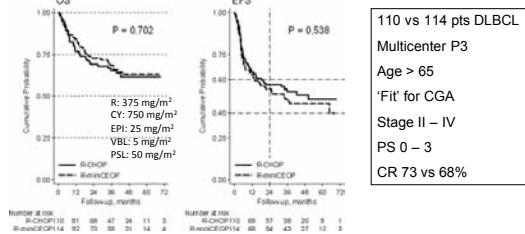

## Alternative regimens

- Alternates for doxorubicine

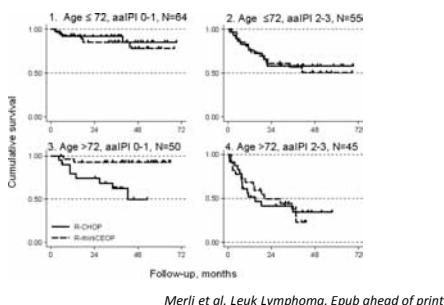

### R-THP-COP

### R-CHOP vs R-miniCEOP

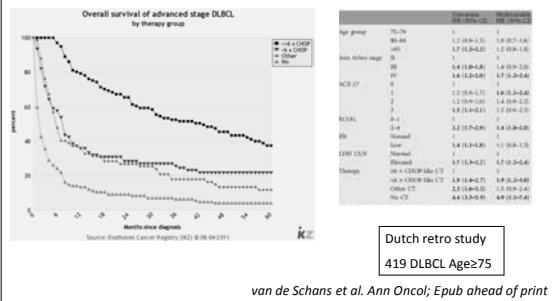

### R-miniCEOP preferred in elder and low risk patients

## Unfitの患者に対して

- Best supportive careがBestか？

## Two side of the medallion...

## Relapse/refractory elderly DLBCL

- R-CMD:

65歳以上30例でCR 57%、2yOS 45%

- 70歳以上R-IVAD:

70歳以上10例でCR 50%、2yOS 50%

Niitsu et al. Cancer Sci 2006; 97: 933-7.  
Miura et al. Int J Hematol; 94: 90-6.

## ジレンマに対する現時点での回答

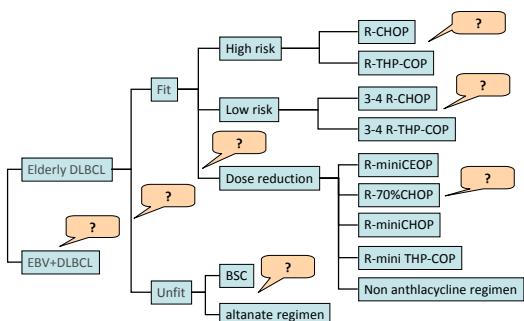

- 高齢DLBCLのもつ背景は多様である
- 単一の戦略を確立することは事実上不可能

↔ R-CHOPを軸に高度に個別化

今後の開発

- 治療強度設定に対する意思決定ツール
- 至適治療強度を算出するアルゴリズム

## Future directions

## Data mining

- The fourth paradigm of science
- Experimentation, Theory, Computation/Simulation -

Tony Hey. Harvard Business Review Nov. 2010  
Bellazzi et al Wiley Advanced Review 2011 1: 416-30

## 高齢DLBCL患者に対する客観的バイオマーカーに準じた至適治療強度推定モデルの確立(案)

- 目的

併存疾患スコアや血清総蛋白等のバイオマーカーが化学療法の効果・毒性および予後等の治療アウトカムに与える影響を探索的に解析し、高齢DLBCL患者に対する至適治療強度を推測する意思決定モデルの確立を目指す

- 方法

調査表記入による多施設協同後方視研究

## 血清TPはtolerabilityを予測する

Figure 2. Overall Survival according to TP and IPI

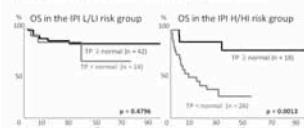

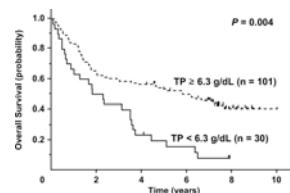

Table 2-b. Multivariate analysis

	HR	95%CI	p value
IPI H/Hi	2.92	1.32 - 6.96	0.0076
TP < normal	3.36	1.51 - 8.04	<b>0.0026</b>

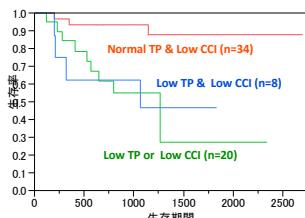

Miura et al. Ann Oncol 2010. 21(suppl 9): 40

## 血清TPはPTCLsにおいてprognostic markerとなる

Watanabe et al. Leuk Lymph 2010. 51: 813-21

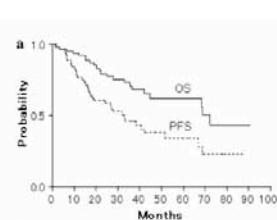

## 血清TP/CCIは'Fit/Unfit'を予測しうる

62 pts DLBCL	
All given R-CHOP	
Age > 65	
Stage I – IV, PS 0 – 4	
Mean RDI 66 vs 54 vs 44% (p<0.01)	

Unpublished

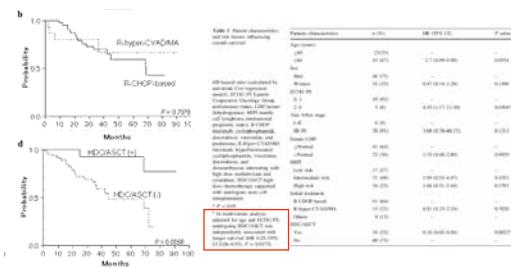

## Does more intensive therapy have effects on MCL?

「未治療マントル細胞リンパ腫における化学療法および造血幹細胞移植に対する後方視的多施設共同研究」					
64 Pts MCL					
Various treatment					
Median Age = 64					
25% Pts given ASCT					

Miura et al. Int J Hematol 2011 93:684-6

## Induction; no. Consolidation; probably yes.

Miura et al. Int J Hematol 2011 93:684-6

## Induction regimen did not predict survival for MCL given ASCT

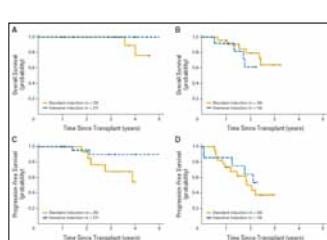

Table 4. Induction Therapy and Clinical Characteristics. (Journal of Clinical Oncology, Vol. 29, No. 13, June 1, 2011)					
Induction	No. (%)	No. (%)	No. (%)	No. (%)	P
R-hyperCVAD/MA	21 (37)	21 (37)	21 (37)	21 (37)	NS
R-CHOP-based	14 (24)	14 (24)	14 (24)	14 (24)
